How to talk to patients about
what to expect with their
treatment, results, and cost.

Real patient treated for the appearance of moderate to severe forehead lines, lateral canthal lines, and glabellar lines. Results may vary.

BOTOX[®] Cosmetic (onabotulinumtoxinA) Important Information

Indications

BOTOX[®] Cosmetic (onabotulinumtoxinA) is indicated in adult patients for the temporary improvement in the appearance of:

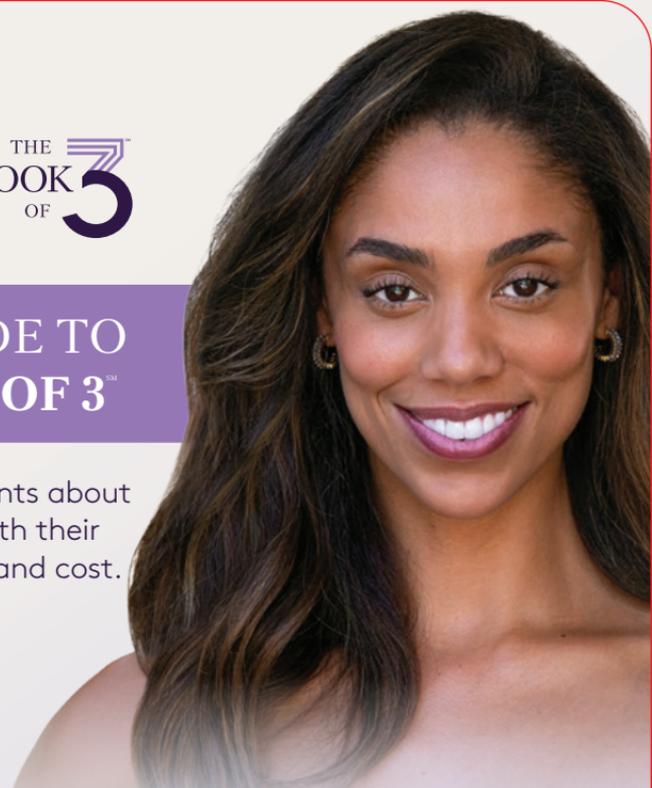

- Moderate to severe glabellar lines associated with corrugator and/or procerus muscle activity
- Moderate to severe lateral canthal lines associated with orbicularis oculi activity
- Moderate to severe forehead lines associated with frontalis activity

IMPORTANT SAFETY INFORMATION, INCLUDING BOXED WARNING

WARNING: DISTANT SPREAD OF TOXIN EFFECT

Postmarketing reports indicate that the effects of BOTOX[®] Cosmetic and all botulinum toxin products may spread from the area of injection to produce symptoms consistent with botulinum toxin effects. These may include asthenia, generalized muscle weakness, diplopia, ptosis, dysphagia, dysphonia, dysarthria, urinary incontinence, and breathing difficulties. These symptoms have been reported hours to weeks after injection. Swallowing and breathing difficulties can be life threatening and there have been reports of death. The risk of symptoms is probably greatest in children treated for spasticity, but symptoms can also occur in adults treated for spasticity and other conditions, particularly in those patients who have an underlying condition that would predispose them to these symptoms. In unapproved uses and approved indications, cases of spread of effect have been reported at doses comparable to those used to treat cervical dystonia and spasticity and at lower doses.

IMPORTANT SAFETY INFORMATION (continued)

CONTRAINDICATIONS

BOTOX[®] Cosmetic is contraindicated in the presence of infection at the proposed injection site(s) and in individuals with known hypersensitivity to any botulinum toxin preparation or to any of the components in the formulation.

Please see additional Important Safety Information on the following pages.

Q *How do I know if BOTOX[®] Cosmetic is right for me?*

A It comes down to whether you have moderate to severe frown lines, crow's feet lines, and forehead lines.¹

When you smile, frown, and raise your eyebrows, you can look for lines in these 3 areas.

If you schedule a consultation with your specialist, they will assess these 3 areas and decide if BOTOX[®] Cosmetic is right for you.

You can also visit **TheLookof3.com** to learn more about BOTOX[®] Cosmetic and how lines form in the upper face.

PATIENT EDUCATION TIP

Considerers of treatment often use social media to learn about their options.² Post educational materials on your practice's social media to help encourage patients to ask about treatment.

IMPORTANT SAFETY INFORMATION (continued)

WARNINGS AND PRECAUTIONS

Lack of Interchangeability Between Botulinum Toxin Products

The potency units of BOTOX[®] Cosmetic are specific to the preparation and assay method utilized. They are not interchangeable with other preparations of botulinum toxin products and, therefore, units of biological activity of BOTOX[®] Cosmetic cannot be compared to nor converted into units of any other botulinum toxin products assessed with any other specific assay method.

WARNINGS AND PRECAUTIONS (continued)

Spread of Toxin Effect

Please refer to Boxed Warning for Distant Spread of Toxin Effect.

No definitive serious adverse event reports of distant spread of toxin effect associated with dermatologic use of BOTOX[®] Cosmetic at the labeled dose of 20 Units (for glabellar lines), 24 Units (for lateral canthal lines), 40 Units (for forehead lines with glabellar lines), 44 Units (for simultaneous treatment of lateral

Please see additional Important Safety Information on the following pages.

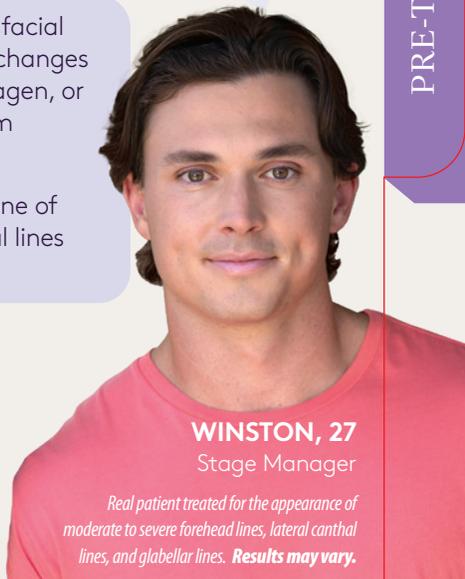

Q Will BOTOX[®] Cosmetic work for me?

A A combination of factors can cause facial lines. It's not just about the cellular changes that may occur, or reduction of collagen, or damage caused by free radicals from the sun and the environment.

Repeated muscle contractions are one of the underlying causes of upper facial lines that your specialist will assess.

BOTOX[®] Cosmetic works beneath the surface to temporarily reduce the underlying muscle activity that causes moderate to severe frown lines, crow's feet lines, and forehead lines in adults—to help them look visibly smoother.¹

WINSTON, 27
 Stage Manager

Real patient treated for the appearance of moderate to severe forehead lines, lateral canthal lines, and glabellar lines. Results may vary.

Natural-looking results with BOTOX[®] Cosmetic.^{2,3,*†}

*84% of pooled subjects (n = 592) who received 20 Units in forehead lines and glabellar lines, respectively, reported being "Very Satisfied" or "Mostly Satisfied" with the natural-looking results of treatment compared to 5.8% (n = 241) with placebo at day 30. This item was part of the Facial Line Satisfaction Questionnaire Follow-Up Treatment Satisfaction domain. In addition, 96% of market research subjects (n = 134) treated for crow's feet lines reported they "Completely Agree" or "Somewhat Agree" that BOTOX[®] Cosmetic provides natural-looking results.^{2,3}

†In 2 clinical trials, 90% and 82% (n = 260 each) of patients reported they were "Very Satisfied" or "Mostly Satisfied" (top 2 out of 5 responses) with their treatment results at day 60 vs 1% and 3%, respectively, for placebo (n = 6 total).¹

IMPORTANT SAFETY INFORMATION (continued)

WARNINGS AND PRECAUTIONS (continued)

Serious Adverse Reactions With Unapproved Use

Serious adverse reactions, including excessive weakness, dysphagia, and aspiration pneumonia, with some adverse reactions associated with fatal outcomes, have been reported in patients who received BOTOX[®] injections for unapproved uses. In these cases, the adverse reactions were not necessarily related to distant spread of toxin, but may have resulted from the administration of BOTOX[®] to the site of injection and/or adjacent structures. In several of the cases, patients had pre-existing dysphagia or other significant disabilities. There is insufficient information to identify factors associated with an increased risk for adverse reactions associated with the unapproved uses of BOTOX[®]. The safety and effectiveness of BOTOX[®] for unapproved uses have not been established.

LOOK
OF **3**

Q What's *The Look of 3*SM?

A If it's right for you, **The Look of 3**SM is an opportunity to get treated in 3 areas with 64 Units, at least 3 times a year. Your treatments should be spaced at least 90 days apart.¹

Only BOTOX[®] Cosmetic can give you **The Look of 3**SM because only BOTOX[®] Cosmetic is FDA approved to temporarily improve the look of 3 areas—moderate to severe frown lines, crow's feet lines, and forehead lines in adults.^{1,5-8}

With **The Look of 3**SM, you can have just the look you're looking for—still you, just with fewer lines.¹

Ask your specialist about **The Look of 3**SM.

WARNINGS AND PRECAUTIONS (continued)

Hypersensitivity Reactions

Serious and/or immediate hypersensitivity reactions have been reported. These reactions include anaphylaxis, serum sickness, urticaria, soft-tissue edema, and dyspnea. If such reactions occur, further injection of BOTOX[®] Cosmetic should be discontinued and appropriate medical therapy immediately instituted.

Please see additional Important Safety Information on the following pages.

Real patients treated for the appearance of moderate to severe forehead lines, lateral canthal lines, and glabellar lines. Results may vary.

IMPORTANT SAFETY INFORMATION (continued)
WARNINGS AND PRECAUTIONS (continued)

Patients with pre-existing swallowing or breathing difficulties may be more susceptible to these complications. In most cases, this is a consequence of weakening of muscles in the area of injection that are involved in breathing or oropharyngeal muscles that control swallowing or breathing (see *Boxed Warning*).

Please see additional Important Safety Information on the following pages.

**PATIENT
EDUCATION TIP**

“Baby Botox” is not
FDA approved.

Q *Why 3 areas?*

A Your facial muscles are interrelated.

That's why your specialist may inject BOTOX[®] Cosmetic to temporarily improve the look of your moderate to severe frown lines, crow's feet lines, and forehead lines at the same time with 64 total Units.¹

BOTOX[®] Cosmetic is the only treatment of its kind that can treat these 3 areas at the same time.^{1,5-8}

Real patient treated for the appearance of moderate to severe forehead lines, lateral canthal lines, and glabellar lines.

Results may vary.

ADVERSE REACTIONS

The most frequently reported adverse reactions following injection of BOTOX[®] Cosmetic for glabellar lines were eyelid ptosis (3%), facial pain (1%), facial paresis (1%), and muscular weakness (1%).

The most frequently reported adverse reaction following injection of BOTOX[®] Cosmetic for lateral canthal lines was eyelid edema (1%).

The most frequently reported adverse reactions following injection of BOTOX[®] Cosmetic for forehead lines with glabellar lines were headache (9%), brow ptosis (2%), and eyelid ptosis (2%).

Please see additional Important Safety Information on the back of this page.

IMPORTANT SAFETY INFORMATION (continued)

DRUG INTERACTIONS

Co-administration of BOTOX[®] Cosmetic and aminoglycosides or other agents interfering with neuromuscular transmission (eg, curare-like compounds) should only be performed with caution as the effect of the toxin may be potentiated. Use of anticholinergic drugs after administration of BOTOX[®] Cosmetic may potentiate systemic anticholinergic effects.

The effect of administering different botulinum neurotoxin products at the same time or within several months of each other is unknown. Excessive neuromuscular weakness may be exacerbated by administration of another botulinum toxin prior to the resolution of the effects of a previously administered botulinum toxin.

Excessive weakness may also be exaggerated by administration of a muscle relaxant before or after administration of BOTOX[®] Cosmetic.

USE IN SPECIFIC POPULATIONS

There are no studies or adequate data from postmarketing surveillance on the developmental risk associated with use of BOTOX[®] Cosmetic in pregnant women. There are no data on the presence of BOTOX[®] Cosmetic in human or animal milk, the effects on the breastfed child, or the effects on milk production.

Please see accompanying BOTOX[®] Cosmetic full Prescribing Information, including Boxed Warning, or visit https://www.rxabbvie.com/pdf/botox-cosmetic_pi.pdf
